Students interested in pursuing a career in the field of health care should consider the following options:

- **Healthcare Administration:** This program focuses on the management and operations of healthcare organizations. Graduates can work in various settings, including hospitals, clinics, and long-term care facilities.
- **Healthcare Compliance:** This program prepares students to ensure that healthcare organizations adhere to federal and state regulations. Graduates can work as compliance officers or consultants.
- **Healthcare Law:** This program provides students with a strong foundation in legal principles and their application to the healthcare industry. Graduates can work as legal counsel or in-house attorneys.
- **Healthcare Ethics:** This program explores the moral principles and values that guide healthcare professionals. Graduates can work as ethics consultants or in research and education.

But Krasner himself is ambivalent. "We should not make an overly fast claim that the process [of change] is irreversible," he says, "and I don't think it is." He also cautions that the "possibility of a system going in the opposite direction is a possibility. There are already examples of countries that have come back and forth between the two states."

Iran says it may resume nuke work as negotiations fail

TEHRAN, Iran (AP) — Iran's nuclear program is not dead, and the country may resume work on a nuclear weapon if negotiations with the United States fail, a senior Iranian official said Sunday.

The official, who spoke on condition of anonymity, said Iran has not given up on its nuclear program, but it is not ready to resume work on a nuclear weapon until it has a clear understanding of the United States' position.

Iran has been accused of developing nuclear weapons, but it has repeatedly denied the charges. It says it is a peaceful nuclear power and that its program is for civilian use.

The United States and other countries have imposed sanctions on Iran's nuclear program, but Iran has refused to accept them. It says the sanctions are illegal and that it will continue to develop its nuclear program.

Figure 1. Schematic representation of the experimental design. The subjects were divided into two groups: the control group (n = 10) and the experimental group (n = 10). The control group received a standard training program, while the experimental group received a training program with a specific focus on the task. The subjects were then tested on the task, and the results were compared between the two groups.

Travels with my husband

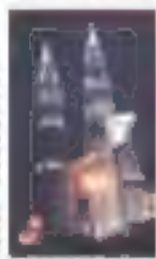

Part 1 of a series
 by Elizabeth Leung
 (Continued)

When I was a child, I used to ask my mother why she always went to the theatre with my father. She would always tell me that it was a special time for them, a time when they could be alone and enjoy each other's company. I never understood why she went to the theatre with my father until I got married.
